Construction Site Debris Requirements

Litter and construction waste must be contained; please be courteous to your neighbors and the environment. The City will withhold inspections, fine and/or charge cleanup costs for continuous violations.

On every construction site, residential and commercial, when a building permit is required and issued by the City, a commercial dumpster shall be maintained to deposit all construction debris generated by the construction project. In lieu of a commercial dumpster, a fenced area constructed of snow fencing or posts and woven wire or a bin constructed of plywood, chipboard or posts and wood railings (crib-like) may be provided.

Each construction site shall be cleaned of construction debris daily, with said debris being deposited in the debris receptacle.

All construction debris shall be hauled from the site and deposited in a licensed waste disposal facility. The burying of construction debris or any other type of debris on a construction site or on any property within the city is prohibited.

A certificate of occupancy shall not be issued until a construction site is free of construction debris.

City Code Sec. 42-21. Construction site debris.
