

2025 Priority Array

03/24/25

March 20, 2025

SKAGIT COUNTY PRIORITY ARRAY
2025 Update – March 2025

INTRODUCTION

Skagit County's Priority Array has been developed based on three Washington Administrative Codes or WAC's. WAC 136-14-020 states "*Priority programming techniques shall be applied in the ranking of all potential projects on the road system of each County . . . Priority programming will not be required, but is recommended, for the local access road system.*" WAC 136-14-030 goes on to state "*Items to be included and considered, which may vary from county to county, in the technique for roads shall include, but need not be limited to the following:*

(1) Traffic volumes
(2) Roadway condition
(3) Geometrics
(4) Safety and accident history
(5) Matters of significant local importance

Finally, WAC 136-14-040 states "*The resulting priority array(s) shall be updated not later than the first Monday in October and shall be consulted together with bridge priorities by the county legislative authority and county engineer during the preparation of the proposed six-year transportation program as described in chapter 136-15 WAC*

The 2025 Priority Array that Skagit County has developed is based on previous Priority Arrays developed since the 2002 Priority Array. The basic approach in its development was to utilize the information that is already available from current programs and existing computerized databases that are maintained on an ongoing basis by the State of Washington and Skagit County Public Works. Most of the base data for the 2025 Priority Array came from the "Roadlog" database, a part of the County Road Administration Board's (CRAB) **GISMo** infrastructure database. Data was also captured from County records including recent pavement projects; BST, or chipseal resurfacing; County Traffic Studies, and County collision records. Data was then transferred electronically to a spreadsheet program where the data was transformed into the 2025 Priority Array.

SUMMARY

The following seven factors (and their point ranges) were used in Skagit County's 2025 Priority Array:

Traffic	=	(Square Root of Average Daily Traffic) / 10; (0.4 to 13.3)
Trucks	=	2 * (6 – FGTS Rating); (0.0 to 10.0)
Collisions	=	Accidents Per Million Vehicle Miles (APMVM); (0.0 to 25.0)
Pavement	=	(100 – PSC Rating) / 10; (0.0 to 10.0)
Width	=	(Design Standard Width – Current Width) / 2; (0.0 to 4.0)
H Curve	=	Horizontal Curve Rating * 3; (3.0 to 9.0)
V Curve	=	Vertical Curve Rating * 3; (3.0 to 9.0)

Total Rating = Sum of above ratings – a higher rating means a higher priority for potential improvement.

DISCUSSION

Traffic Traffic Studies are systematically conducted by Engineering Staff using traffic data counters as part of the County's Traffic Program. From these studies the Average Annualized Daily Traffic (AADT) is calculated. While traffic volume is a factor that is required for the County's Priority Array, using AADT directly presents a problem. AADT on the functionally classified system can range from under 100 to over 15,000. Simply dividing the AADT by 1,000 would give a scoring range of about 0.1 to about 16 but would have very few roads with high ratings. For example, the median for AADT (half of the segments are higher and half are lower) is about 1,000. Thus, the segment with the median AADT would have Traffic rating of 1.0 (quite low to be a middle rating). To get a better distribution, the square root of AADT divided by 10 was chosen for the Traffic factor. This gives a similar range of ratings (0.4 to 12.7) but increases the median Traffic rating to 3.7.

Trucks Truck routes on city streets, county roads and state highways in Skagit County are rated by the State based on the freight tonnage carried in a given period of time. These ratings range from 20,000 tons in a 2-month period to 10,000,000 tons in a year. These rated facilities are referred as the Freight and Good Transportation System (or FGTS). The FGTS ratings, which came from the "Roadlog" database within **GISMo**, range from 1 to 5, highest to lowest. They were converted to a 2 to 10, lowest to highest rating for the Priority Array Truck factor. Non-truck route roads were given a 0-rating factor.

Pavement The Pavement Surface Condition (PSC) is a quality rating of the pavement surface from 0 to 100. A low rating represents a road surface that is in poor condition and in need of repair, resurfacing, or reconstruction. A high rating (near 100) usually represents a road surface that has recently been improved. Public Works staff bi-annually field inspects and rates all road segments in the County on several surface condition factors. Together, these factors produce an initial PSC. These ratings are entered and calculated in **GISMo**. For the Pavement rating for the Priority Array to be on a 0 to 10 scale from good to bad, the PSC is subtracted from 100 and the result is divided by 10.

Collisions The collision data item in the "Roadlog" database is Accidents Per Million Vehicle Miles or APMVM. This collision factor uses the reported collisions, road segment length, and traffic volume to calculate the collision rate. This is the Collision factor used in the 2025 Priority Array. APMVM is calculated in **GISMo**. While this factor ranges from 0 to 25, only a small number of the segments have a factor greater than 10.

Width The Washington state Department of Transportation (WSDOT) and Skagit County have design standards for new construction and reconstruction of roadways based on the traffic level. For each road segment, the design standard for total lane width (currently 12 feet per lane) was input by hand into the Priority Array spreadsheet. By comparing this design standard with the current pavement width from the "Roadlog" in **GISMo**, a pavement width deficit for each road segment was created. This deficit gives the width deficit for each side of the road. If the pavement width is greater than the standard, the factor is set at 0.

H Curve This is short for Horizontal Curve Rating and is resident in **GISMo**. This rating is from 1 to 3 (no curves to very curvy) and was produced by field inspection of each road segment. The rating is multiplied by three to give a final rating range of 3 to 9.

V Curve This is short for Vertical Curve (hilly terrain) Rating and mirrors the Horizontal Curve Rating. This rating is from 1 to 3 (flat to hilly) and was produced by field inspection of each road segment. The rating is multiplied by three to give a final rating range of 3 to 9.

TABLES

The Skagit County 2025 Priority Array is listed in four different tables. They each represent the full Priority Array but with the data sorted in differing ways. Details for each table are shown below.

TABLE 1 – LIST BY RATING

This Table presents the Priority Array in the traditional manner, showing all the functionally classified road segments in order of priority from highest to lowest by Total Rating.

TABLE 2 – LIST BY ROAD NAME

This Table presents the Priority Array in alphabetical order. In this listing, it is easy to find the final rating of any specific roadway segment.

TABLE 3 – LIST BY COMMISSIONER DISTRICT & RATING

This list is like Table 1 except that it provides three lists by ratings, one for each Commissioner District.

TABLE 4 – LIST BY COMMISSIONER DISTRICT & ROAD NAME

This list is like Table 2 except that it provides three alphabetical lists, one for each Commissioner District. Below is the key for the Table column headings:

StateLRS *- The official State Road Number beginning with County Code*

Road Name *– The officially established Road Name*

BMP *– The Beginning Milepost for the listed road segment*

EMP *– The Ending Milepost for the listed road segment*

Length *– The length of the road segment*

BMP Description *– The location description for Beginning Milepost (BMP) for the listed road segment*

CommDist *– The Commissioner District number for the listed road segment*

FFC *– The Federal Functional Class of the listed road segment (all non-Local Access roads)*

Traffic *– the Traffic Volume factor rating as described above*

Truck *- the Truck Traffic Volume factor rating as described above*

Pave *- the Pavement Surface Condition factor rating as described above*

Collisions*– the Collision factor rating as described above*

CollisionCnt *– The actual number of collisions in the segment in the past 3 years*

PW *- the Pavement Width factor rating as described above*

H Curve *- the Horizontal Curvature factor rating as described above*

V Curve *- the Vertical Curvature factor rating as described above*

Total *– the road segment's overall Priority Array rating – the sum of the above 7 factors*
