CITY CONNECT

Best Ways to Submit a Code Enforcement Concern

The City of Truth or Consequences is sharing a reminder about the best ways to report Code Enforcement concerns. Using the City's official reporting options helps ensure concerns are documented and addressed efficiently. Read the full article here: **torcnm.gov/news_detail_T12_R137.php**.

Transit Enhancements Inspired by Residents

At the request of residents, the City and South Central Regional Transit District (SCRTD) are working with local businesses to improve transit access. Residents identified the need for additional stops to better serve daily needs, and SCRTD and the City welcomed the idea as a practical way to enhance mobility. The City is awaiting approval from Sierra Vista Hospital and Walmart for proposed stops that would benefit patients, shoppers, and employees. Residents also suggested relocating the Courthouse stop to the rear of the building to more effectively serve visitors to the Sierra County Public Health Office. SCRTD confirmed these resident-driven improvements can be easily integrated into existing routes.

Spay & Neuter Grant Making a Big Impact in Sierra County

A total of 84 animals, by mid-March, have already been registered for the City's spay and neuter grant program, and only 9 of those have been shelter dogs. That means over 90% of the funding has gone directly to helping pets in the community, easing the burden on local families and supporting responsible pet care.

This grant, provided by the New Mexico Board of Veterinary Medicine, launched in January and has been operating for about two months. Thanks to strong community participation, many pets have now been spayed, neutered, and vaccinated, which will help reduce the number of puppies and kittens entering the shelter as spring newborn season approaches.

Morgan Street Sewer Upgrade

Work is now underway on the Morgan Street Sewer Upgrade, a project designed to finally provide sewer access to the apartment complex in that area. Until now, the site did not have a connection to the City's sewer system, which limited development. Earlier this week, construction began after the private developer installed a sewer line on his property and covered the cost of relocating the existing manhole. The City will now extend an 8-inch sewer line from that point to tie into the City's system, a contract that is already in place. Once completed, the upgraded connection will allow the apartments to move forward with construction and support future housing growth in the neighborhood. This project represents a coordinated effort between the City and the developer to improve infrastructure and expand residential opportunities.
